## Andover's Chem 300: Accelerated/Honors Chemistry

### Chapter 4, Review Quiz 1

#### 1

Balance the equation  $\text{N}_2\text{O}_5 \rightarrow \text{NO}_2 + \text{O}_2$  using the smallest possible whole-number coefficients.

#### 2

The density of  $\text{CS}_2$  is 1.26 g/mL. Given the unbalanced equation  $\text{CS}_2 + \text{O}_2 \rightarrow \text{CO}_2 + \text{SO}_2$ , how many liters of  $\text{CS}_2$  must react to produce  $4.2 \times 10^3$  g of  $\text{SO}_2$ ?

#### 3

Given the unbalanced equation  $\text{CaCO}_3 + \text{HC}_2\text{H}_3\text{O}_2 \rightarrow \text{Ca}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{CO}_2 + \text{H}_2\text{O}$ , if 16.8 grams of  $\text{CaCO}_3$  is mixed with 11.0 grams of  $\text{HC}_2\text{H}_3\text{O}_2$ :

- Which is the limiting reagent and what maximum mass of  $\text{CO}_2$  can form?
- What mass of the excess reagent remains when the reaction is complete?

#### 4

Given the unbalanced equation  $\text{Pb}(\text{NO}_3)_2 + \text{KI} \rightarrow \text{PbI}_2 + \text{KNO}_3$ , if 4.1 grams of  $\text{KI}$  react with an excess of  $\text{Pb}(\text{NO}_3)_2$  and then 4.9 grams of  $\text{PbI}_2$  are actually collected, what is the percent yield of the reaction?

#### 5

A 2.85 gram sample of a solid mixture contains  $\text{MgH}_2$  as well as unreactive material. When added to water, only the  $\text{MgH}_2$  in the mixture reacts to produce 0.0575 grams of  $\text{H}_2$  according to the unbalanced equation  $\text{MgH}_2 + \text{H}_2\text{O} \rightarrow \text{Mg}(\text{OH})_2 + \text{H}_2$ . What is the percent by mass of  $\text{MgH}_2$  in the mixture?
